

Student: Garry Ditchley
Course: ME 354-005 – Machine Design

Assignment: Assignment
Due Date: Due Date

Problem 1

Given

State the information provided in the problem, including known quantities, dimensions, material properties, assumptions, and any other conditions needed to solve the problem.

Find

State the quantities or results that must be determined. Clearly identify each requested result and include any required units, criteria, or methods specified by the problem.

Solution

Present the analysis used to solve the problem. Include the governing equations, assumptions, intermediate calculations, diagrams, tables, and supporting reasoning necessary to obtain the requested results.

Answer

Summarize the final results of the analysis. Clearly state the requested quantities with appropriate units and include any conclusions or comparisons required by the problem.

Problem 2**Given**

State the information provided in the problem, including known quantities, dimensions, material properties, assumptions, and any other conditions needed to solve the problem.

Find

State the quantities or results that must be determined. Clearly identify each requested result and include any required units, criteria, or methods specified by the problem.

Solution

Present the analysis used to solve the problem. Include the governing equations, assumptions, intermediate calculations, diagrams, tables, and supporting reasoning necessary to obtain the requested results.

Answer

Summarize the final results of the analysis. Clearly state the requested quantities with appropriate units and include any conclusions or comparisons required by the problem.

Problem 3**Given**

State the information provided in the problem, including known quantities, dimensions, material properties, assumptions, and any other conditions needed to solve the problem.

Find

State the quantities or results that must be determined. Clearly identify each requested result and include any required units, criteria, or methods specified by the problem.

Solution

Present the analysis used to solve the problem. Include the governing equations, assumptions, intermediate calculations, diagrams, tables, and supporting reasoning necessary to obtain the requested results.

Answer

Summarize the final results of the analysis. Clearly state the requested quantities with appropriate units and include any conclusions or comparisons required by the problem.

Problem 4**Given**

State the information provided in the problem, including known quantities, dimensions, material properties, assumptions, and any other conditions needed to solve the problem.

Find

State the quantities or results that must be determined. Clearly identify each requested result and include any required units, criteria, or methods specified by the problem.

Solution

Present the analysis used to solve the problem. Include the governing equations, assumptions, intermediate calculations, diagrams, tables, and supporting reasoning necessary to obtain the requested results.

Answer

Summarize the final results of the analysis. Clearly state the requested quantities with appropriate units and include any conclusions or comparisons required by the problem.
